

Customized testing

For a number of applications it is necessary to test the piezo components in harsh conditions or with a realistic load. We can also increase the confidence level (100% vs. AQL). For industries like space and medical, there are regulations that implies additional testing. To be able to investigate individual elements, we also offer traceability.

WE CURRENTLY OFFER THESE OPPORTUNITIES FOR CUSTOM TESTS OF PIEZO COMPONENTS

- Sampling
- Geometry
- Traceability
- Destructive tests
- Ageing

Other tests on request

If you have any questions or specific requirements regarding our custom tests, please [contact sales](#).
