

# Product development from prototype to production

We offer a full-service solution, where we conduct feasibility studies, simulation and proof of concept as well as developing prototypes of your sensor. When the product is ready for production and assembly, we can provide volume and serial production based on our quality system ISO 9001.

## CAPABILITIES

### Customization of all types of piezoelectric devices

We can custom design all types of piezoelectric devices if the design is feasible in terms of specifications. Here are some common types of piezoelectric devices we offer to customize:

- Vibration sensors
- Shock sensors
- Piezoelectric microphones
- Actuators
- [Bone microphones](#)
- Implantable microphones
- Bone vibrators
- Force sensors
- Pressure sensors

### Piezo sensor capabilities

These are the capabilities we can apply to develop your sensor:

- Feasibility studies, simulation, proof of concept etc.
- Development of prototypes
- From prototype to production
- Serial manufacturing and assembly

### Contact us and let us find the right solution

If you have any questions or want more information about our customized piezoelectric sensor products, please use our Request for Quote form or [contact sales](#).
