

# Product development from prototype to production

We offer a full-service solution, where we conduct feasibility studies, simulation and proof of concept as well as developing prototypes of your piezo transducer. When the product is ready for production and assembly, we can provide volume and serial production based on our quality system ISO 9001.

## CAPABILITIES

### Any kind of piezoelectric device

We can custom design any kind of piezoelectric transducer if the design is feasible in terms of specifications. Here are some common types of piezoelectric devices we offer to customize:

- Sonic and ultrasonic transducers
- Ignition systems
- Ammunition powering and initiation
- Push buttons
- Piezoelectric transformers
- Resonance transducers
- Wide band transducers

### Transducer capabilities

These are the capabilities we can apply to develop your transducer:

- Feasibility studies, simulation, proof of concept etc.
- Development of prototypes
- From prototype to production
- Serial manufacturing and assembly

### Contact us and let us find the right solution

If you have any questions or want more information about our customized piezoelectric transducer products, please use our Request for Quote form or [contact sales](#).
